

**CTSA Consortium Child Health Oversight Committee (CC-CHOC)
Pediatric Drugs and Devices
September 11, 2009
4:00 PM – 5:00 PM ET**

Agenda

- I. Volunteers for Pediatric Research Ethic Workgroup's federated IRB project**
- II. Building a pediatric research network of networks**

NICHHD developed a list of institutions where CTSA and National Children's Study or other NIH supported pediatric research networks are either co-located as a pair or all three. This list could be used by CTSA representatives to reach out to the other investigators at their institution and inquire about pooling resources or expertise to build up a type of network of networks. Such an approach would be one of the concrete steps we could take to build a comprehensive pediatric clinical research platform. In view of the many administrative supplements that NCCR will be awarding for pediatric outcomes research using NICHHD money, it may be possible to further leverage those projects.
- III. Upcoming Workshops**
 - A. Methodologies to Set Priorities for Child Health Clinical Research:**
November 18-19, 2009 at Natcher Auditorium on NIH main campus and videocast
 - B. Data Acquisition Workshop:** February 25, 2010 at Natcher Auditorium on NIH main campus and videocast
- IV. Opportunities to participate in other CTSA Key Function Committees/Working Groups**

The purpose is for CTSA Pediatric Drug and Device Workgroup members to influence, be informed or leverage efforts to promote pediatric drug and device development.
- V. Update on Demonstration Projects for Pediatric Device Development**

Funded by FDA Orphan Products program as described in Food and Drug Administration Amendments Act of 2007
